

Using gstudio

Rodney J. Dyer
Department of Biology
Virginia Commonwealth University

January 4, 2014

The `gstudio` package is an R package for the spatial analysis of genetic data. Since it uses resources external to this document and to R itself (e.g., it grabs maps from Google, etc), this vignette is only a placeholder for the full documentation.

A full users guide for this package can be found at:

<http://dyerlab.github.io/gstudio/>

And the development code for this and other packages under development by R.J. Dyer is hosted at:

<http://github.com/dyerlab/>

If you have any questions regarding this package or its development, feel free to email rjdyer@vcu.edu.
