

enriched in B cells (II) enriched in monocytes (IV)
activated dendritic cells type I interferon response Monocyte surface signature
complement activation (I) enriched in monocytes (II) TBA myeloid cell enriched receptors and transporters
platelet activation – actin binding TLR and inflammatory signaling DC surface signature
immune activation
– generic cluster antiviral IFN signature
enriched in B cells (I) enriched in neutrophils (I) enriched in activated dendritic cells (II)
enriched in myeloid cells and monocytes complement and other receptors in DCs TBA
innate antiviral response transmembrane and ion transporters (I)
