

R_split

```
graph LR; R_split[R_split] --> C_split[C_split]; R_split --> ncol[ncol]; R_split --> nrow[nrow]; C_split --> get_tol[get_tol];
```

A flowchart illustrating a data processing pipeline. It starts with a black box labeled 'R_split' on the left. Three arrows branch out from its right side: one pointing up and right to a white box 'C_split', one pointing straight right to a white box 'ncol', and one pointing down and right to a white box 'nrow'. From the 'C_split' box, a single arrow points further right to a white box labeled 'get_tol'.
