

# Package ‘deps’

January 8, 2026

**Type** Package

**Title** Dependency Management with 'roxygen'-Style Comments

**Version** 0.4.1

**Description** Manage your source code dependencies  
by decorating your existing R code with special,  
'roxygen'-style comments.

**License** MIT + file LICENSE

**LazyLoad** yes

**Imports** renv, jsonlite, remotes

**RoxygenNote** 7.3.3

**Encoding** UTF-8

**BugReports** <https://github.com/analythium/deps/issues>

**URL** <https://hub.analythium.io/deps/>,  
<https://github.com/analythium/deps>

**Language** en-US

**NeedsCompilation** no

**Author** Peter Solymos [aut, cre] (ORCID:  
<https://orcid.org/0000-0001-7337-1740>),  
Analythium Solutions Inc. [cph, fnd]

**Maintainer** Peter Solymos <[peter@analythium.io](mailto:peter@analythium.io)>

**Repository** CRAN

**Date/Publication** 2026-01-08 14:30:08 UTC

`create`*Create a Dependencies JSON File*

---

## Description

Discover dependencies and write a `dependencies.json` file.

## Usage

```
create(  
  dir = getwd(),  
  file = "dependencies.json",  
  output = dir,  
  installed = c("base", "recommended"),  
  overwrite = TRUE,  
  ask = TRUE  
)
```

## Arguments

<code>dir</code>	Path to the directory where the files to be scanned are located.
<code>file</code>	The name of the file to be save, default is <code>"dependencies.json"</code> .
<code>output</code>	Path to the directory where JSON file should be written to.
<code>installed</code>	The <code>priority</code> argument for <code>installed.packages()</code> for packages to be excluded.
<code>overwrite</code>	Logical, should the file in the output directory be overwritten if exists?
<code>ask</code>	Logical, asking confirmation before writing the <code>dependencies.json</code> file.

## Value

Invisibly returns the list of file names that were created. The side effect is a JSON (and possibly a text for system requirements) file written to the hard drive. The function fails when there are no R related files in `dir`.

## Examples

```
dir <- system.file("examples/01-basic", package = "deps")  
out <- tempdir()  
create(dir, output = out, ask = interactive())  
cat(readLines(file.path(out, "dependencies.json")), sep = "\n")  
unlink(file.path(out, "dependencies.json"))
```

---

install	<i>Install Dependencies</i>
---------	-----------------------------

---

## Description

Install dependencies from an existing `dependencies.json` file or after discovering the dependencies.

## Usage

```
install(  
  dir = getwd(),  
  file = "dependencies.json",  
  upgrade = "never",  
  cleanup = TRUE,  
  timeout = 300L,  
  ask = TRUE,  
  ...  
)
```

## Arguments

dir	Path to the directory where the JSON file should be written to.
file	The name of the file to be save, default is "dependencies.json". If the file is not found in <code>dir</code> , <code>create()</code> is called.
upgrade	Should package dependencies be upgraded? Argument passed to <code>remotes</code> functions.
cleanup	Logical, clean up files created by <code>create()</code> when <code>file</code> does not exist.
timeout	Integer, timeout for file downloads (default 60 seconds can be short).
ask	Logical, asking confirmation before writing the <code>dependencies.json</code> file.
...	Other argument passed to <code>remotes</code> functions.

## Value

Returns `NULL` invisibly. The side effect is the dependencies installed.

## Examples

```
dir <- system.file("examples/01-basic", package = "deps")  
out <- tempdir()  
create(dir, output = out, ask = interactive())  
cat(readLines(file.path(out, "dependencies.json")), sep = "\n")  
## Not run:  
install(out)  
  
## End(Not run)  
unlink(file.path(out, "dependencies.json"))
```
